

SIoux FALLS, SD – GAS LINE INSTALLATION

In the fall of 2008 Ellingson Companies partnered with the City of Sioux Falls, SD for a gas line installation project. The project allows the City of Sioux Falls to sell methane gas, generated at a local landfill, to POET Energy helping fuel the boilers at POET's Chancellor, SD ethanol plant.

“This is truly a win-win for the City of Sioux Falls, POET, our community and customers of the landfill. The City feels fortunate to be able to make a significant impact on the environment and improve revenue at the Landfill at the same time.”

- Sioux Falls, SD Mayor Dave Munson

Ellingson Companies installed over 51,000 feet of 12” HDPE gas line between the landfill and POET in just under three weeks using the “plowing method.” Trenchlessly, Ellingson Companies installed 8,000 feet

of 12” HDPE using directional drilling and pipe ramming. The entire project, over 11 miles of gas line, was completed in less than two months. This includes installation and testing.

Ellingson Companies has the experience and OQ certifications you can trust for your next gas line installation project.

Regardless of the specific needs of your project, Ellingson Companies has the equipment, expertise and highly trained staff required to install HDPE and other pipe materials utilizing a wide variety of trenchless, environmentally friendly and low impact installation techniques.
